

The Incredible Awesomeness Of God's Creation

Introduction

I was inspired to write this article as I sat outside in my back yard this summer just before sundown, and looked up and around at God's magnificent creation all around me... the tall trees, the birds chirping, the blue sky, the green grass, and so much more. I heard the robins giving what I think is their warning call. I absolutely love robins... They are so gentle and so protective of their young. They constantly chirp a warning signal if anything or anyone gets too close to their nest.

The Tremendous Variety In God's Design

As I thought about these things I wondered about just how MANY things, how many living creatures God has created. And bear in mind that these living creatures do not even take into account God's creation of various inorganic "elements" in our world... metals, gasses, and other "inert" materials that God created.

More Design In Creation Than Mankind Can Even Account For

Do you know that even the greatest researchers and scientists don't know how many different life-forms exist on planet earth. They don't have a clue as evidenced by this quote from phys.org:

Current estimates for the number of species on Earth range between 5.3 million and 1 trillion. [1]

There are many species that they know have not even been discovered yet. What is ironic, is that the people that promote evolution can't even agree with each other as to how many species there are from the various categories of species (plants, mammals, fish, etc) yet they *claim* to know for sure that all those species evolved from some gigantic explosion billion of years ago, an explosion that they can't identify the source of and of materials in that

explosion that they can't identify with any degree of certainty either. Nor can they explain how an explosion can create order and design in the observable universe.

Let's Look At Just ONE Design

Let's see how much intelligent design went into just ONE of God's creatures. Let's look at the spider, like the one shown at the top of this article. Spiders are born knowing how to design a web. They are born with a built-in web-making machine - their silk supply. They are born with oily feet so they won't stick to their own web. They are born with fangs. These fangs they are born with are connected to a supply of venom. They use those fangs to inject that venom into their victims to paralyze those victims and dissolve the tissues of those victims. All their limbs are designed to work in unison to allow the spider to have smooth movement in all directions. They know to jump or run if they are being attacked. Did you know that about 99% of all spiders have eight eyes. But some have six, four, two or none at all. Spiders with at least 4 eyes, have two types of eyes: a large pair of primary eyes that form images, and a secondary pair of eyes that enable spiders to track movements and gauge distances. If there is no Intelligent Designer, then where did spiders learn how to do so many things from birth and how could the evolutionary fairy tale of "random chance" explain the level of complexity seen in just this one creature, a bug? The answer of course is that God's magnificent creative design is built-into these creatures and all living things.

*"For the wrath of God is revealed from heaven against all ungodliness and unrighteousness of men, who hold the truth in unrighteousness; Because that which may be known of God is manifest in them; for God hath shewed it unto them. **For the invisible things of him from the creation of the world are clearly seen, being understood by the things that are made,** even his eternal power and Godhead; so that they are without excuse." Romans 18-20*
