

ABORTED FETAL CELL LINE PRODUCTS AND ETHICAL ALTERNATIVES US AND CANADA AS OF JANUARY 2021

Unbeknown to most people, many vaccines are made with aborted fetal tissue as the following chart clearly indicates under the “Fetal Cell Line” column. The vaccine manufacturers have been regrowing cells from fetuses aborted in the 1970s. They could use other material for vaccines but they don’t usually do that. It’s a satanic way of justifying abortion and of “saving money” on vaccine production. Which is also why they use mercury compounds in vaccines, touting them as necessary “preservatives” when in reality it is simply cheaper - because by using the mercury to weaken your immune system, the manufacturers require less of the more expensive “genetic material” for an “effective” vaccine. I have read that the current Flu vaccines are morally produced (ie. they do not use fetal tissue). NOTE: The links that say “Click Here for Full List” only work in the PDF version mentioned below.
