Surgical Mutilation And Dismemberment Is Not A Cure For Cancer

DISCLAIMER: This article and similar articles on this website are for informational purposes only and are not intended to replace the medical advice of a doctor or oncologist who has been trained at Big Pharma funded medical schools where those medical professionals are thoroughly trained to mutilate people, irradiate people and poison people with carcinogens known as chemo. Those are the people I am supposed to refer you to so that you never dare to try cheap, safe, effective alternative medical treatments. If you do find a cancer cure through the many links to many online articles we reference here, blame the people that wrote those articles so that Big Pharma can sue them instead of suing this website. Thanks!

Introduction:

In this wicked and corrupt world we live in, most people can't wrap their heads around the fact that our worldwide medical system is controlled by the world's richest and most evil criminals. Those folks are eugenicists pretending to be humanitarians. By their own admission, they are interested in massively reducing the world's population, so they can then grab the world's land and other resources for themselves. Here are some of their own statements for you to think about, the next time you go for a cancer treatment:
"Depopulation should be the highest priority of foreign policy towards the

third world, because the US economy will require large and increasing amounts of minerals from abroad, especially from less developed countries." – Henry A. Kissinger, former US secretary of state

"War and famine would not do. Instead, disease offered the most efficient and fastest way to kill the billions that must soon die if the population crisis is to be solved. AIDS is not an efficient killer because it is too slow. My favorite candidate for eliminating 90 percent of the world's population is airborne Ebola (Ebola Reston), because it is both highly lethal and it kills in days, instead of years. "We've got airborne diseases with 90 percent mortality in humans. Killing humans. Think about that. "You know, the bird flu's good, too. For everyone who survives, he will have to bury nine" – Eric Pianka, famous evolutionary ecologist

"Frankly I had thought that at the time Roe was decided, there was concern about population growth and particularly growth in populations that we don't want to have too many of." – Ruth Bader Ginsburg, former US supreme court judge

"The world today has 6.8 billion people…that's headed up to about 9 billion. If we do a really great job on vaccines, health care, reproductive health services, we could lower that by perhaps 10 to 15 percent." – Bill Gates, billionaire vaccine proponent

"A total population of 250-300 million people, a 95% decline from present levels, would be ideal." – Ted Turner, billionaire media mogul

"In order to stabilize world population, we must eliminate 350,000 per day." – Jacques Yves Cousteau, famous oceanographer and filmmaker

"Cannibalism is a radical but realistic solution to the problem of overpopulation." – Prince Philip, husband of Queen Elizabeth II

"In the event that I am reincarnated, I would like to return as a deadly virus, in order to contribute something to solve overpopulation." – Prince Philip, husband of Queen Elizabeth II

> *"At the highest levels of the medical cartel, vaccines are a top priority because they cause a weakening of the immune system. I know that may be hard to accept, but its true. The medical cartel, at the highest level, is not out to help people, it is out to harm them, to weaken them. To kill them. At one point in my career, I had a long conversation with a man who occupied a high government position in an African nation. He told me that he was well aware of this. He told me that WHO is a front for these depopulation interests."* – Jon Rappoport, free-lance investigative reporter

Freedom Of Information & Censorship In The

Medical Arena:

Thanks to the freedom of access to information, due to the growth of the Internet and along with it, alternative news, alternative science and alternative medicine – the truth is finally getting out about real – yet suppressed/censored – cancer cures.

Is Surgery A Wise Choice For Dealing With Cancer?

What most people don't realize about cutting out body parts that have become cancerous: surgical removal of body parts only stresses out our immune systems more than they already are stressed, because now our bodies have to HEAL from those cancer surgeries AND our bodies have to do without those parts, which are often very ESSENTIAL body parts like lymph nodes, adrenal glands, pancreases, parts of our digestive tracts, parts of our skeleton, parts of our lungs, and body parts that are interconnected with other body parts like breasts and prostate glands. REMOVING body parts does NOT FIX the problem with an malfunctioning immune system that CAUSED the body parts to get cancerous. The CURE is to FIX the immune system, NOT MUTILATE the body.

Recently Announced Cancer Cures?

Apparently, in spite of the mainstream media's ties to Big Pharma, some recently announced cancer cures are making headlines on many alternative news websites. These cancer cures apparently work by assisting the human immune system – and the do that by starving cancer cells to death. These medicines prevent cancer cells from absorbing nutrients from our bodies. These medicines are not promoted nor are they even investigated as cancer cures because:

1. They are too cheap – there is no significant profit to be made by the big pharmaceutical companies that prefer to make huge profits from patented drugs.

2. Cures eliminate customers, and the medical system needs customers, repeat customer, and cured patients are not repeat customers.

3. The population reduction criminals who are way at the top of the medical pyramid don't want more people! and they certainly don't want them living longer lives. That is why they control:

A. the insurance companies and their ties to the medical industry
B. the major hospital networks, the medical schools and medical licensing
C. the highest level health organizations worldwide, like the NIH, WHO, CDC, NIAID etc.

D. the lobbyists who interact between government officials and the medical establishment.
E. the drug companies and the drug regulatory agencies like the FDA.
F. the medical reporting agencies, medical journals and like the Lancet, the New England Journal of Medicine, the American Journal of Medicine and the BMJ.

Here is one of the latest and most promising cancer treatments recently announced by doctors who actually care more about their patients than about pleasing the Big Pharma establishment:

New Cancer Treatment Protocol Featuring Ivermectin, Fenbendazole, and Mebendazole Passes Peer Review, Marking Potential Breakthrough in Therapy

Concluding Remarks:

The biggest problem that we the patients have to face is that ***the system*** cannot be trusted to do its best to CURE us of cancer, with minimal cost and minimal harm to us. That means that we are often on our own when it comes to finding doctors that are willing to offer us safe, cheap, alternative cancer cures. And then – if we can even find such doctors – we are often on our own to PAY for alternative cancer treatments, because the "controlled" insurance companies (including Medicare and Medicaid), often refuse to pay for alternative cancer treatments that the system does not approve of and that the system doesn't even want people to know about, due to the loss of revenue it will mean to the system. I personally know of a woman whose melanoma cancer was treated with cheap and effective vitamin C infusion treatments that only cost $250 per treatment, YET her insurance company would not pay for those treatments. HOWEVER, her insurance company was willing to pay $90,000 and more for experimental chemo treatments. What a corrupt and evil system we have to deal with!
