The Ugly Truth About PCR Tests, Nasal Test Swabs And Nasal Vaccines

Young girl bleeding from eye and nose thanks to punctured nasal cavity by PCR nasal test swab

This web page is primarily a list of links to other articles on the Internet about the Covid-19 PCR tests, exposing them for the useless – and dangerous – tests that they are, such that they can easily – and intentionally – be made to generate false positives, giving the appearance of a virus that you really are not infected with. These tests swabs go so far up your nasal passages that they can easily puncture your nasal wall and even puncture your eye, your pineal gland and even your brain. They can also be used to unknowingly deliver a vaccine into your body through your nose. But why worry? The mainstream media and the medical establishment says they're safe and effective for diagnosing covid virus infections, and they would never lie to us, would they?

CDC withdraws support for PCR tests

Lab alert withdraws standing request to FDA to grant emergency use authorization for PCR tests to detect SARS-CoV-2

by Yudi Sherman

The Centers for Disease Control and Prevention (CDC) will no longer recognize **PCR tests** as valid methods of diagnosing COVID-19 by the end of this year. The CDC announced in a **lab alert** on its website that it will be withdrawing its standing request to the Food and Drug Administration (FDA) to grant emergency use authorization for PCR tests to be used to detect SARS-CoV-2. The request, which was issued in February 2020, will be withdrawn on December 31, 2021, a move which signals that the CDC no longer approves of the use of PCR tests as valid diagnostic methods for COVID-19.

In the CDC's own words: *"After December 31, 2021, CDC will withdraw the request to the U.S. Food and Drug Administration (FDA) for Emergency Use Authorization (EUA) of the CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel, the assay first introduced in February 2020 for detection of SARS-CoV-2 only."*

BREAKING: The CDC is withdrawing its standing request to the FDA to grant emergency use authorization for Covid-19 PCR tests.

After 20 months of lies, the CDC can no longer hide that its use of Covid-19 PCR tests was fake "science" but true fear mongering.

A theragripper is about the size of a speck of dust. This swab contains dozens of the tiny devices. Credit: Johns Hopkins University.

Inspired by a parasitic worm that digs its sharp teeth into its host's intestines, Johns Hopkins researchers have designed tiny, star-shaped microdevices that can latch onto intestinal mucosa and release drugs into the body.

Fauci Admits PCR Test Cannot Detect Infection

BY RHODA WILSON ON JANUARY 15, 2022 • (20 COMMENTS)

Listen Now

Since the beginning of the pandemic, experts have warned that the PCR test is not a valid diagnostic tool and produces far too many false positives, as it can pick up on "dead," nonreplicating viral debris. The US Centers for Disease Control and Prevention ("CDC") now admits the PCR test cannot identify active infection or measure contagiousness.
